Profit	1,376,028 CHF	35,144 CHF

Buying shares, buying tokens.

TH MINING AG is an owner-managed trading company specialized in the trading of industrial minerals diatomite and bentonite. It has been carrying out its activities since 2017.

Together with the EIT (European Institute for Technology), the company invests in further research and development for the extraction of rare earth from recyclable red mud. Its main goal is the sustainable preservation of raw materials in their natural deposits.

In October 2022 the Swiss Ministry of Economy paid 140.000 CHF to support the project.

Head of Advisory Board:

Prof. Dr. Uroš Herlec

Ph.D. in Geology

Former Vice-President of the European Federation of Geologists

OUR GOAL

Our main goal is to excel in years of experience, professionalism, operational discipline, integrity, financial strength, and ethical standards. This allows us to consistently meet the needs of our customers and to develop new markets, which paves our path to success.

By bringing the resources and people together, we will keep on pace with other industries and an ever-changing world.

At TH MINING AG, we're aware that our success is defined by the mutual success of all our parties, which is why we value the relationships we have with everyone involved, our employees, our clients, and our suppliers.

Our most important values are:

- Excellence and continuous improvement;
- Environmental consciousness with a clear focus on sustainability;
- Safety and health of employees.

OUR EMPLOYEES

Our employees represent our highest value as it collectively ensures our continued success. Therefore, we constantly help them grow in their career path through ongoing assessment and training. With the aim to evolve their potential, growth, and success, our leaders provide them with new knowledge and fresh experiences. This way, everyone contributes to individual and company success.

Diatomite

Diatomite is a mineral composed of fossilized remains of tiny aquatic organisms called diatoms, which are a non-renewable resource. The highly pure diatomite from the mountains of North Macedonia contains SiO_2 with more than 77 % absorption power.
